## PRINTED SHEET PROTECTOR SYSTEM AND METHOD

## Abstract of the Disclosure

In addition to a set of dividers having staggered tabs and binder holes, the retail packaging includes a sheet protector pocket having a front sheet and a back sheet and binder holes. The user removes the dividers and pocket from the packaging and custom designs and prints sheet indicia on a paper sheet. He/she then inserts the printed sheet into the pocket whereby the front sheet allows the sheet indicia to be viewed therethrough. The front sheet has pre-printed indicia thereon. With the printed sheet in the pocket and the pocket and dividers assembled in a ringed notebook or other binding system, the sheet indicia and the pre-printed indicia line up with respective ones of the tabs. The indicia thereby form an attractive customdesigned table of contents, which can be easily corrected or changed by the user by simply printing and inserting into the pocket a new sheet. The front sheet can either be transparent or have a window to allow the sheet indicia to be viewed therethrough. An alternative provides the pre-printed or custom-printed indicia on a separate transparent sheet which is inserted in the pocket in front of the printed sheet. Another invention is a pocket assembly having front and back sheets and binder holes and compartments for inserting therein one or more photographs, other images or the like, which can be viewed through the transparent front sheet. Pre-printed framing designs on the front sheet attractively encircle the photographs.
